

Stop Manual LinkedIn Content Today

AUTOMATED PERSONA-DRIVEN ENGAGEMENT SYSTEM.

Recognize The Content Creation Drain

- 80+ hours lost every single week.
- Generic AI destroys your brand trust.
- Inconsistency kills your algorithm reach.

Stop Losing Deals To Silence

- Algorithm penalizes inconsistent profile content updates.
- Low SSI scores lose critical deals.
- Inactivity drops inbound opportunities by 45%.

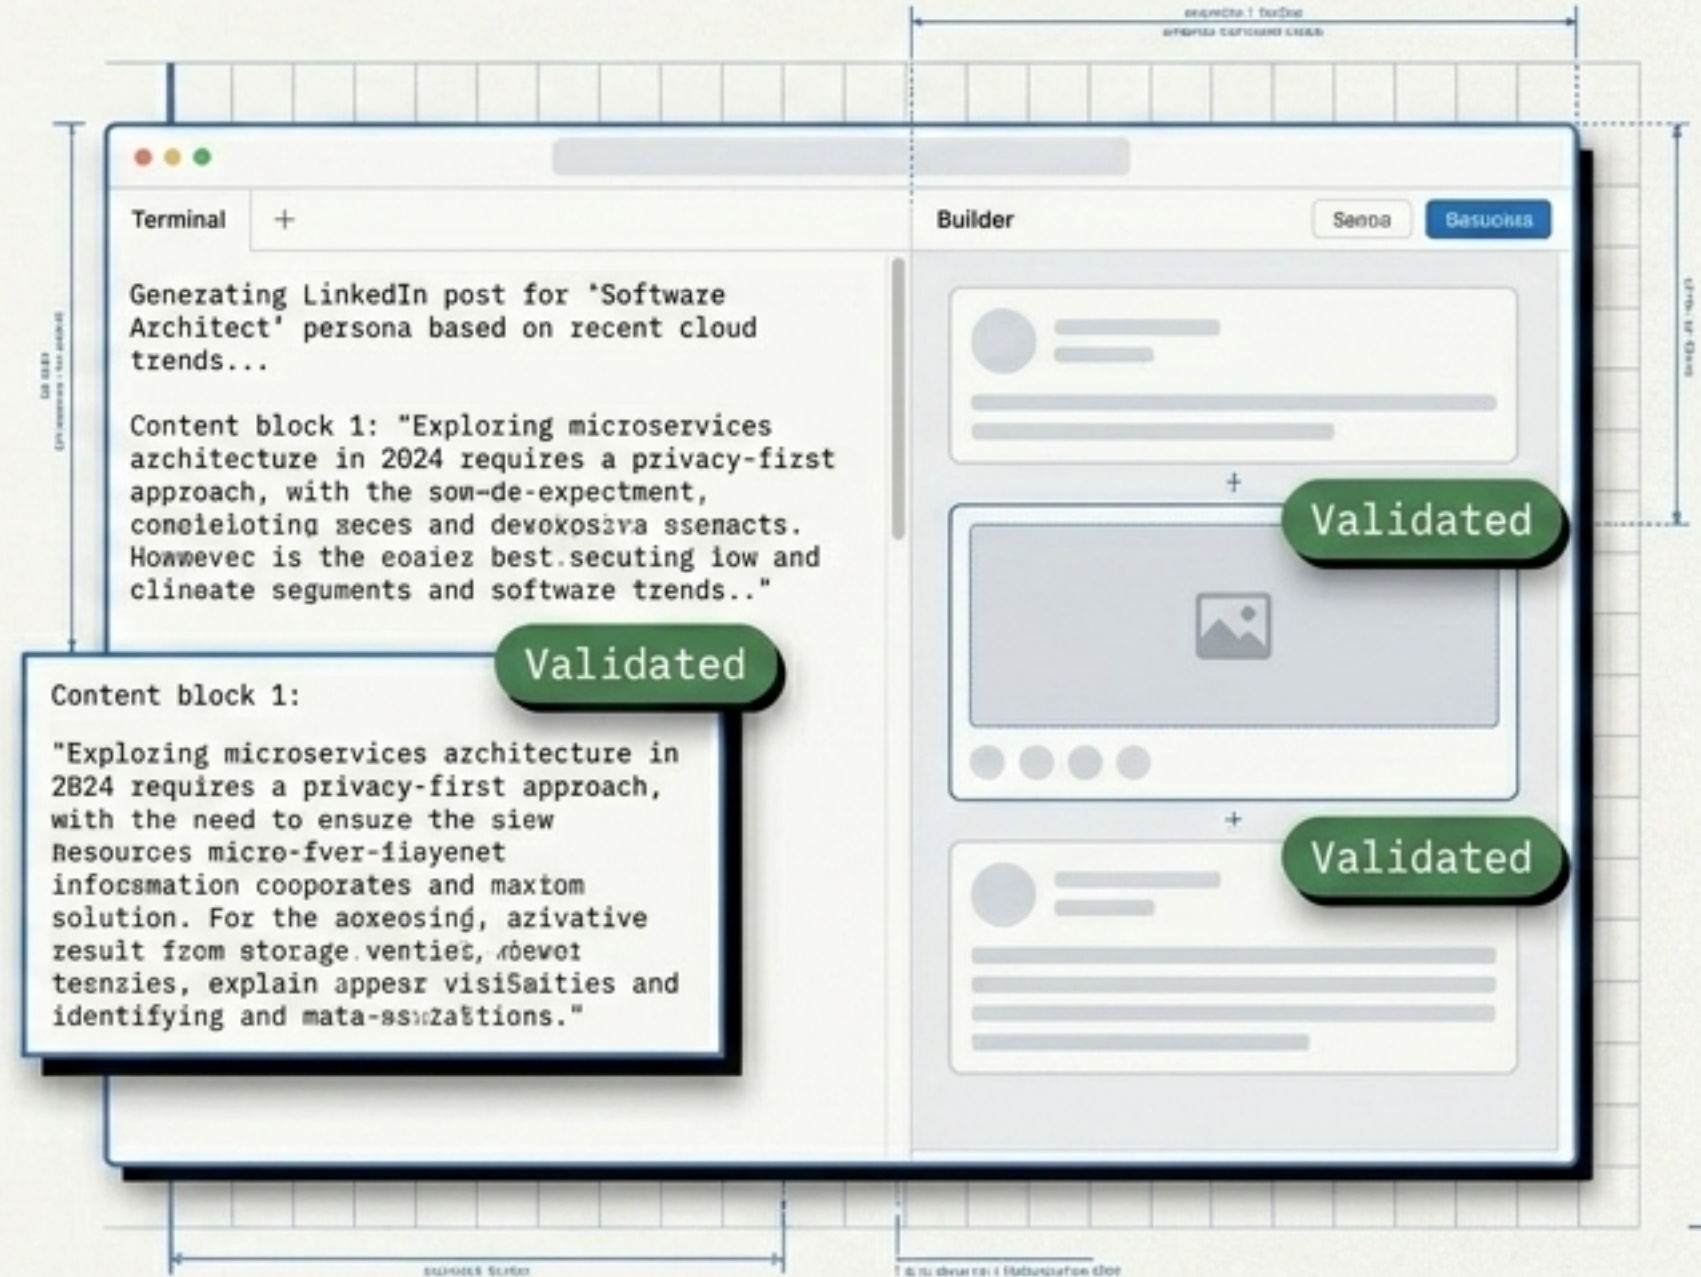

Reject Unacceptable Existing Tool Compromises

- Manual creation is completely unsustainable.
- Cloud AI risks proprietary data privacy.
- Basic wrappers hallucinate dangerous false facts.

Method	Time	Brand Voice	Data Privacy
Manual Team	 Fails	 Passes	 Passes
Cloud AI	 Passes	 Fails	 Fails
SSI Booster	 Passes	 Passes	 Passes

Meet The LinkedIn SSI Booster

- Persona-grounded content automation platform.
- 100% local, privacy-first AI infrastructure.
- Four-layer truth validation ensures accuracy.

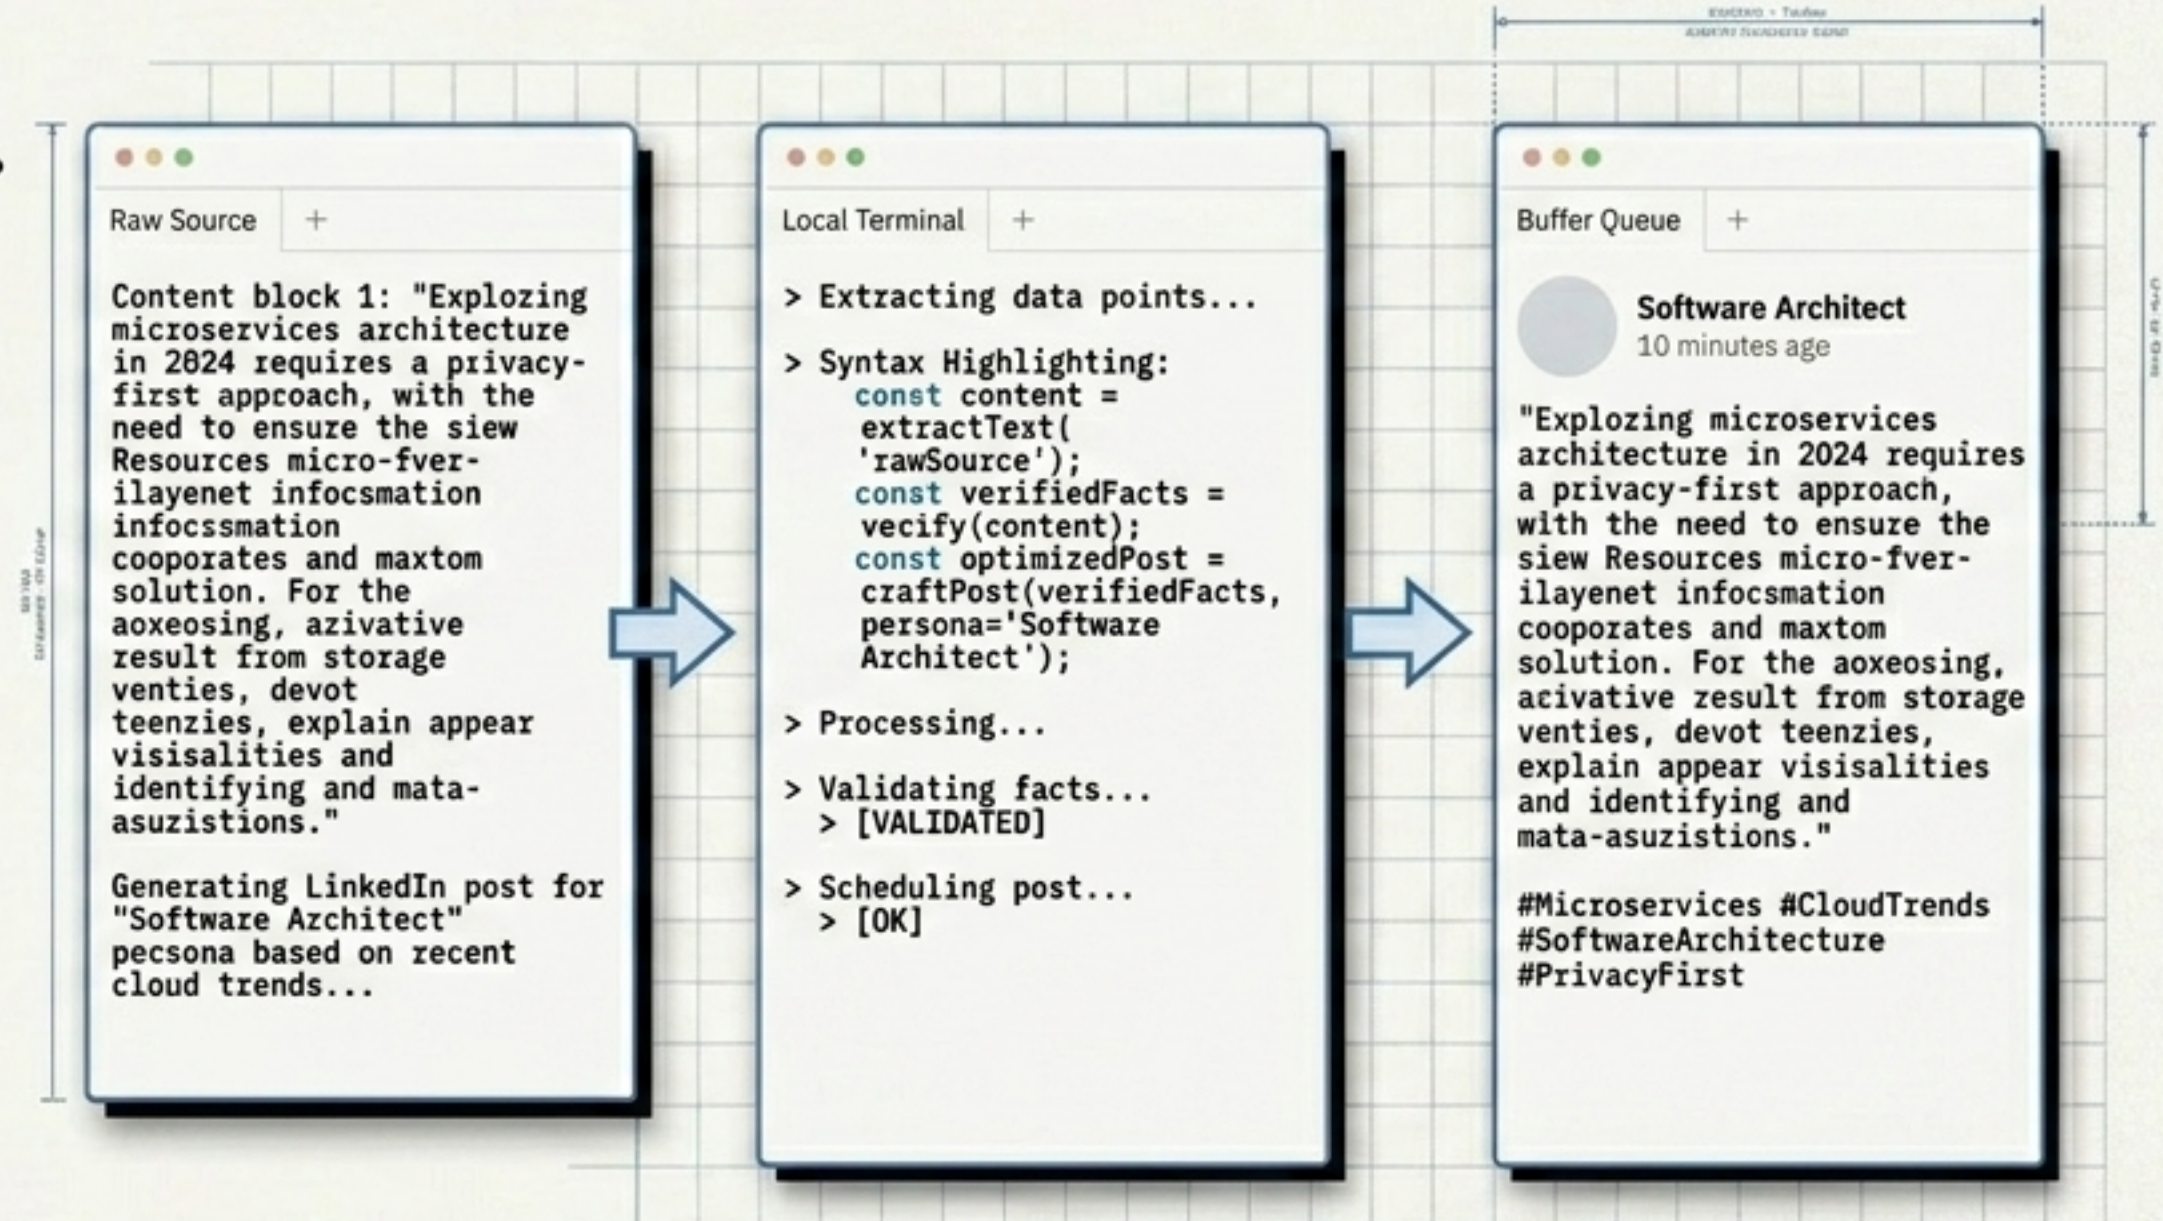

Let's See It In Action

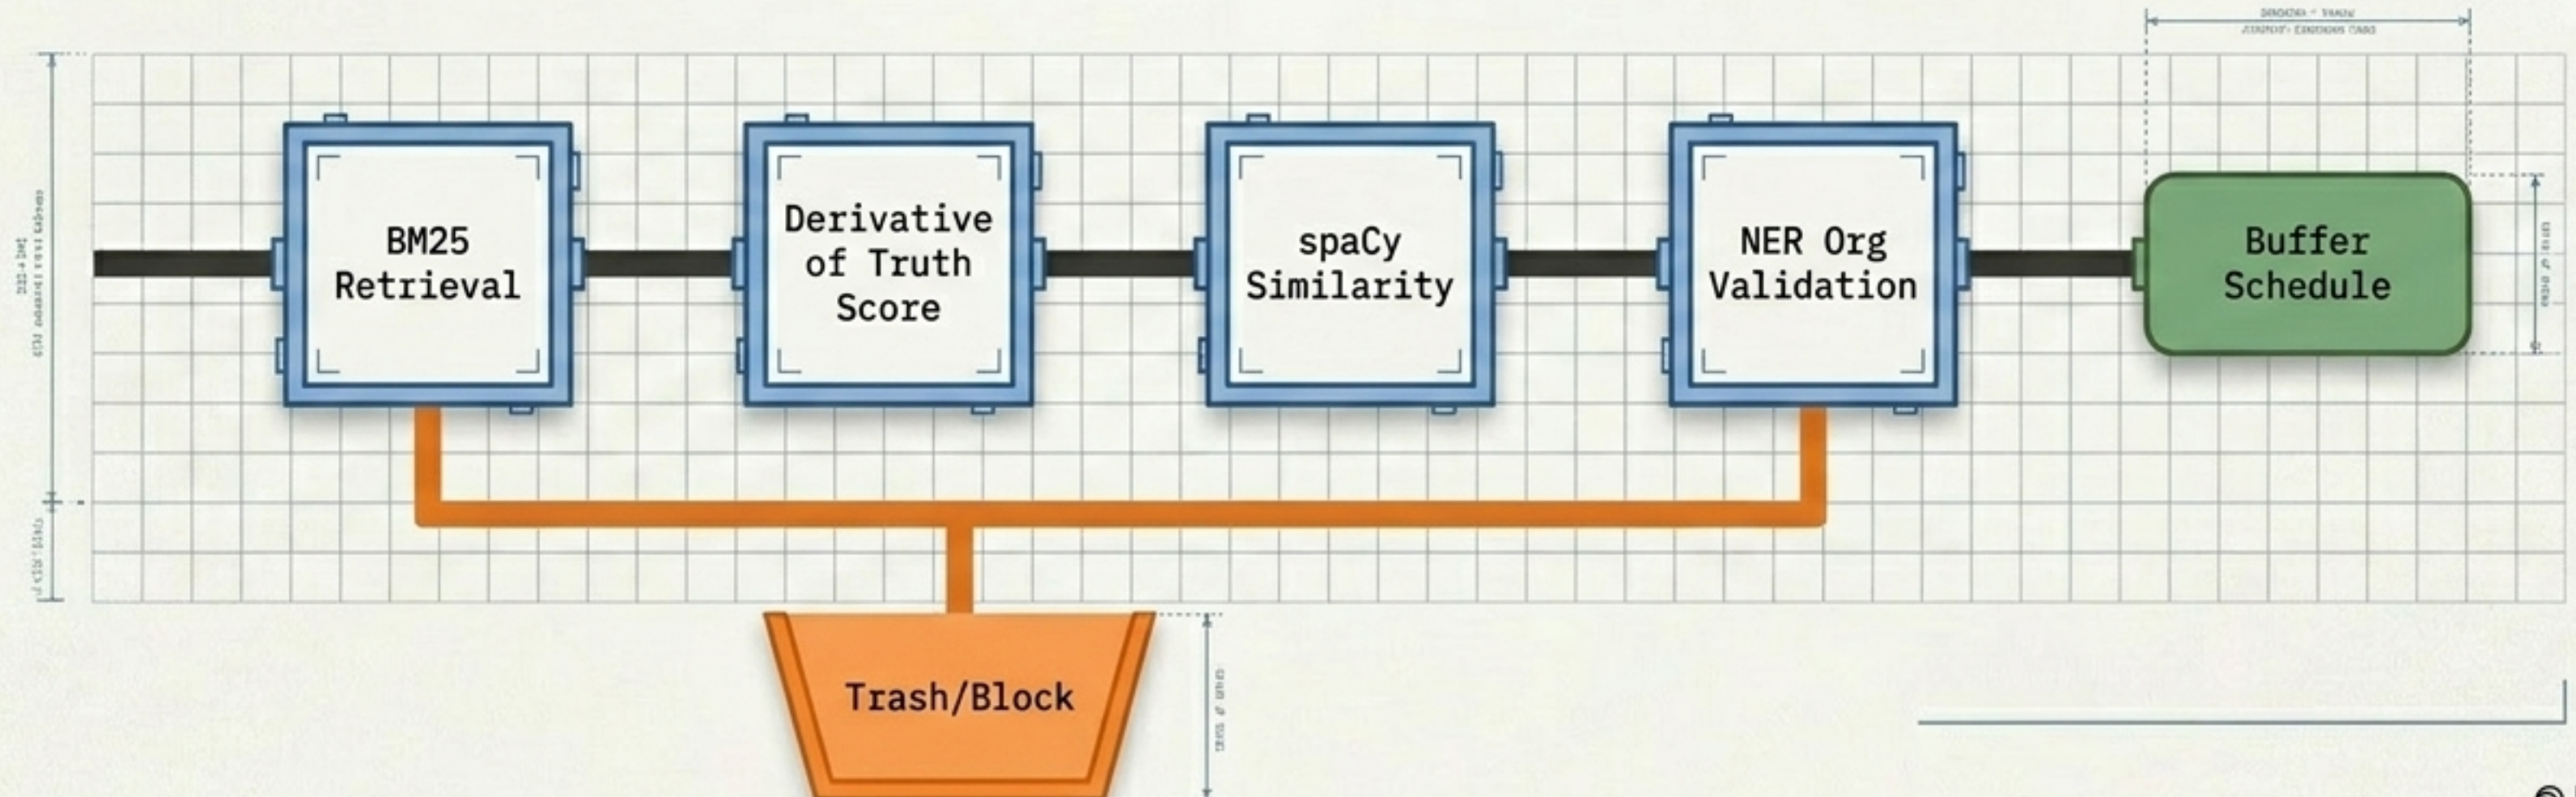

Review What You Just Saw

- 90% reduction in manual posting time.
- Perfect brand voice replication safely achieved.
- Automated factual verification and seamless scheduling.

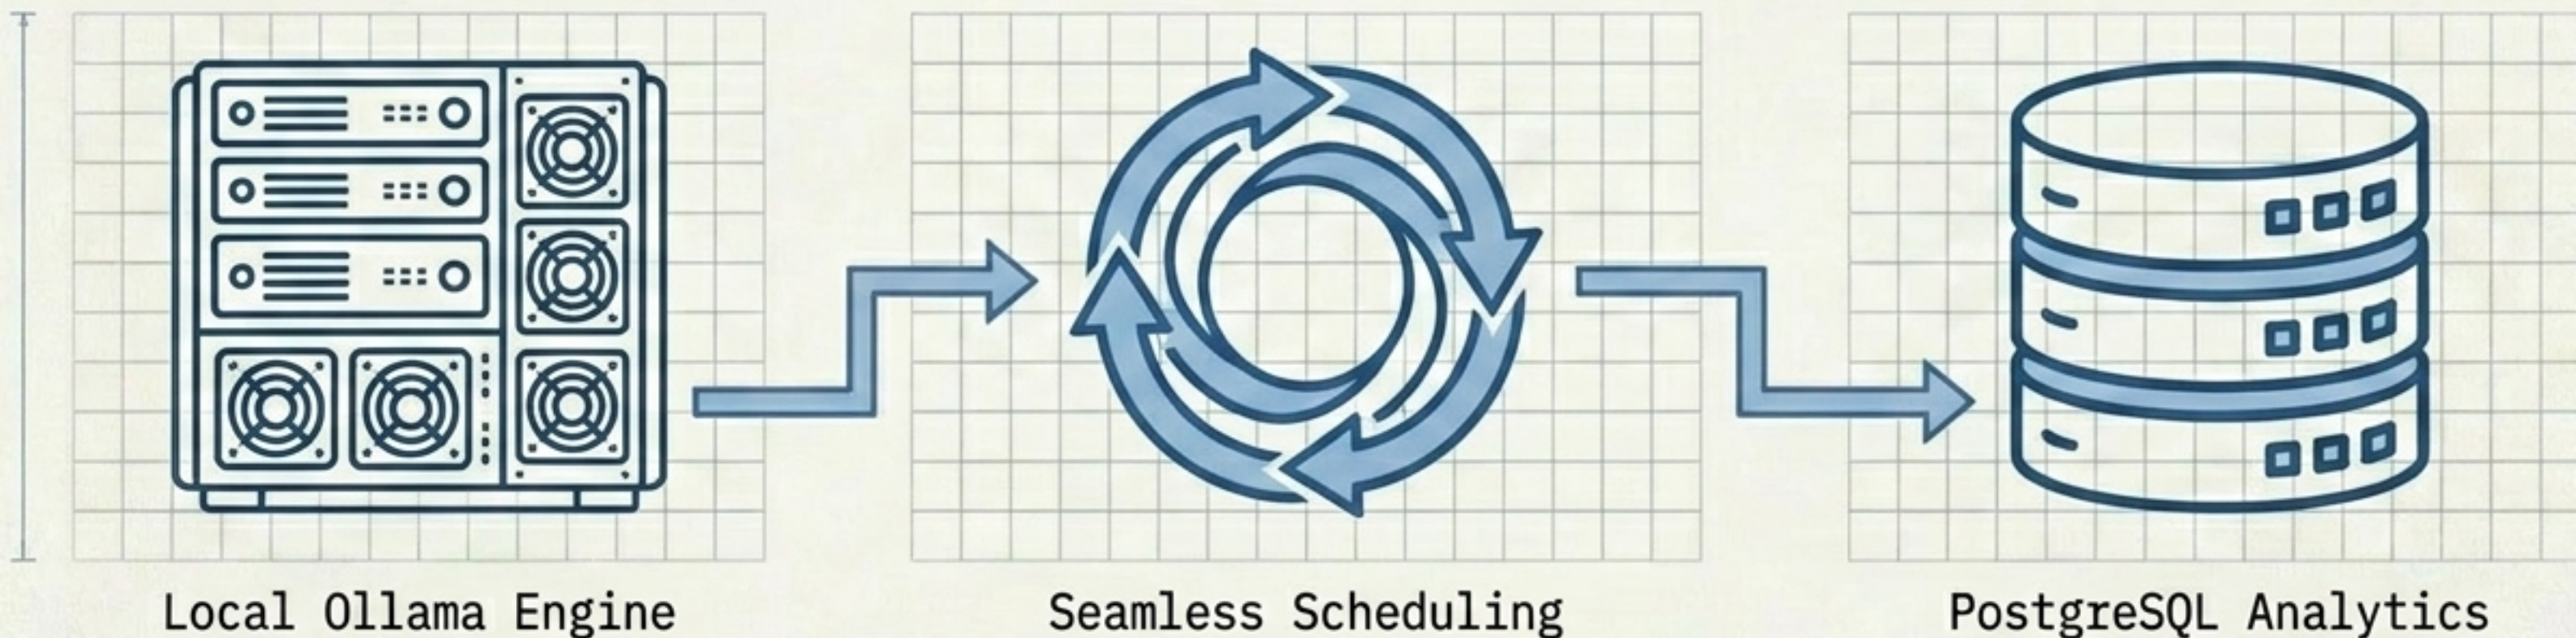

Discover The Four-Layer Truth Gate

- Eliminates AI hallucinations completely.
- Verifies claims against government Katzilla data.
- Routes safe content directly to publishing.

Deploy Secure, Fast, Seamless Integrations

- Runs locally with zero cloud dependencies.
- Integrates directly with Buffer GraphQL API.
- Connects to PostgreSQL analytics databases easily.

Achieve Proven Marketing Team Results

- Reduces manual posting by 90%.
- Unlocks 45% more inbound pipeline opportunities.
- Eliminates the blank page problem entirely.

“This tool removes the blank-page problem, but you decide what goes live. It augments human expertise instead of replacing it.”

Quickstart: Deploy Locally Instantly

1. Setup

```
python -m venv .venv
source .venv/bin/activate
pip install -r requirements.txt
python -m spacy download en_core_web_md # Recommended: includes word vectors
cp .env.example .env
# Fill in PERSONA_SYSTEM_PROMPT, BUFFER_API_KEY, OLLAMA_BASE_URL, OLLAMA_MODEL, etc.
cp data/avatar/persona_graph.example.json data/avatar/persona_graph.json
cp data/avatar/narrative_memory.example.json data/avatar/narrative_memory.json
cp content_calendar.example.py content_calendar.py
```

2. Generate & Schedule Posts

Preview week 1 posts (no Buffer calls):

```
python main.py --schedule --week 1 --dry-run
```

Schedule week 1 posts to Buffer (LinkedIn):

```
python main.py --schedule --week 1
```

Schedule to all channels:

```
python main.py --schedule --week 1 --channel all
```

3. Console Mode — Persona Chat & Tuning

Chat with your persona (no Buffer calls):

```
python main.py --console
```

- Test how well the system knows your background, projects, and skills.
- Try factual questions ("What projects did I do with Neo4j?"), career queries, or ask for advice.
- Use this mode to tune your persona graph and see how changes affect grounding.
- Console mode never writes to Buffer or posts anything — it's safe for experimentation.

4. Curate AI News

Preview curation (no Buffer calls):

```
python main.py --curate --dry-run
```

Push curated ideas to Buffer (review before publishing):

4. Curate AI News

Preview curation (no Buffer calls):

```
python main.py --curate --dry-run
```

Push curated ideas to Buffer (review before publishing):

```
python main.py --curate
```

Schedule curated posts directly:

```
python main.py --curate --type post --channel linkedin
```

5. Learning & Explainability

Reconcile published posts (improves future curation ranking):

```
python main.py --reconcile
```

Show grounding facts after each post:

```
python main.py --curate --avatar-explain
```

Print learning report from moderation events:

```
python main.py --avatar-learn-report
```

6. SSI Tracking

Record today's SSI scores:

```
python main.py --save-ssi 10.49 9.69 11.0 12.15
```

Print SSI report:

```
python main.py --report
```

7. Test Everything

```
pytest tests/ -v
```

Pro tips:

Edit your persona in `data/avatar/persona_graph.json` for best results.

Tweak keywords/feeds in `.env` (`CURATOR_KEYWORDS`, `CURATOR_RSS_FEEDS`).

All generation is local — no cloud AI keys required.

All learning data is stored locally and gitignored.
