

Automate Authentic Growth With Adaptive Social Intelligence

High Social Selling Index Demands Unsustainable Consistency

LinkedIn heavily penalizes inconsistency, causing rapid decay in your 0–100 score and crippling profile visibility.

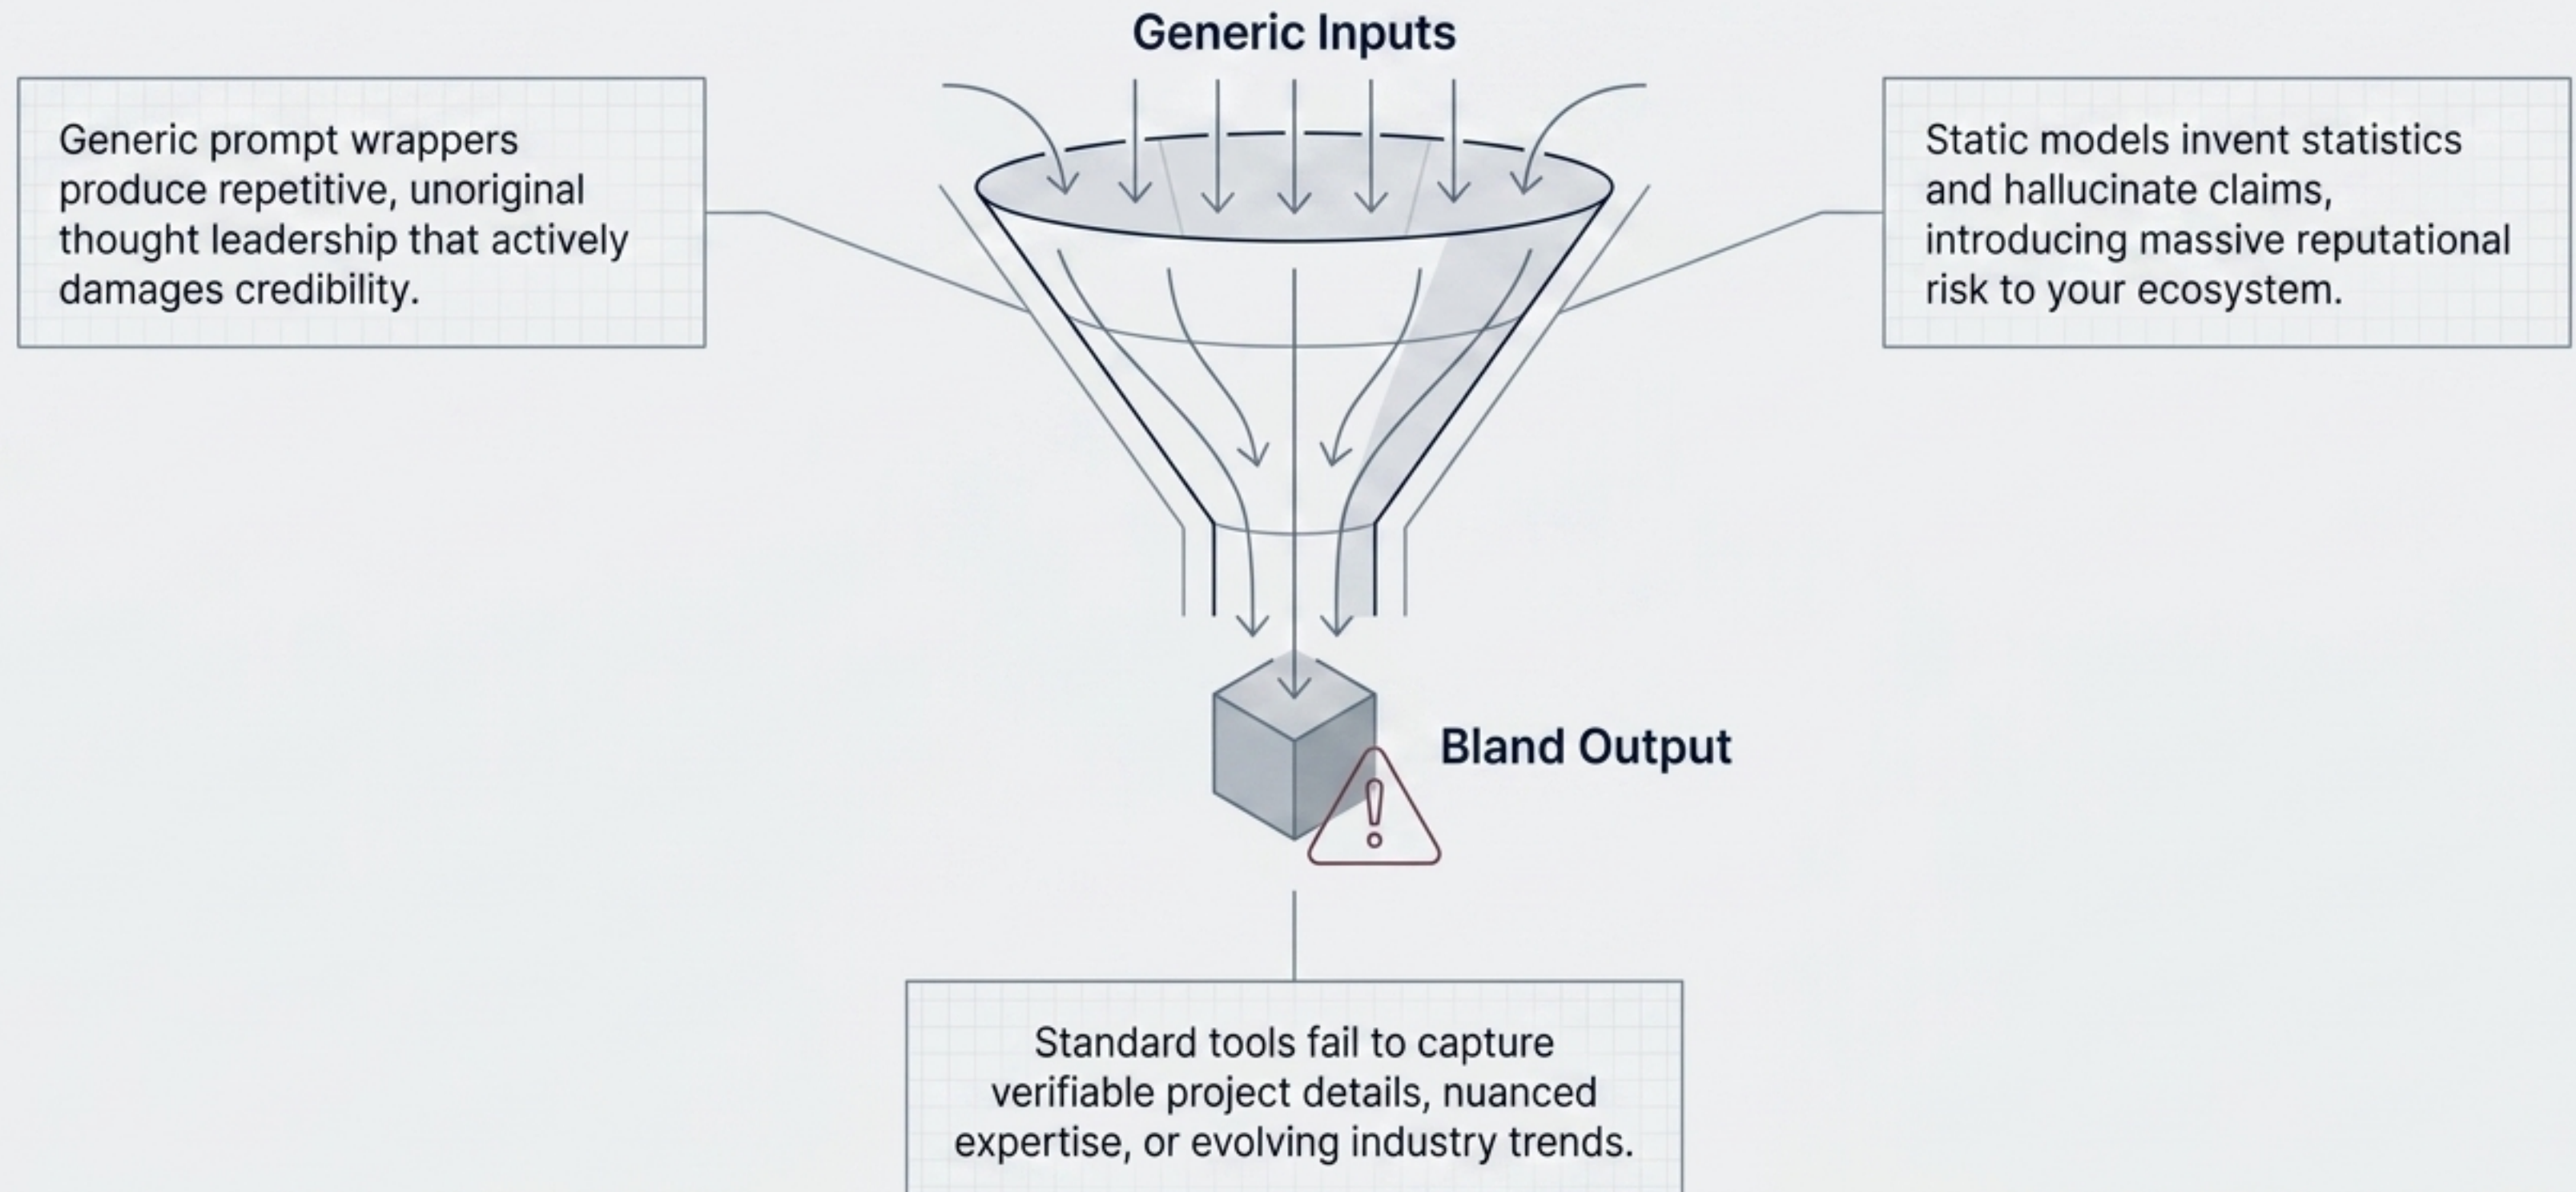

Manual curation and original technical writing drain critical engineering and executive time.

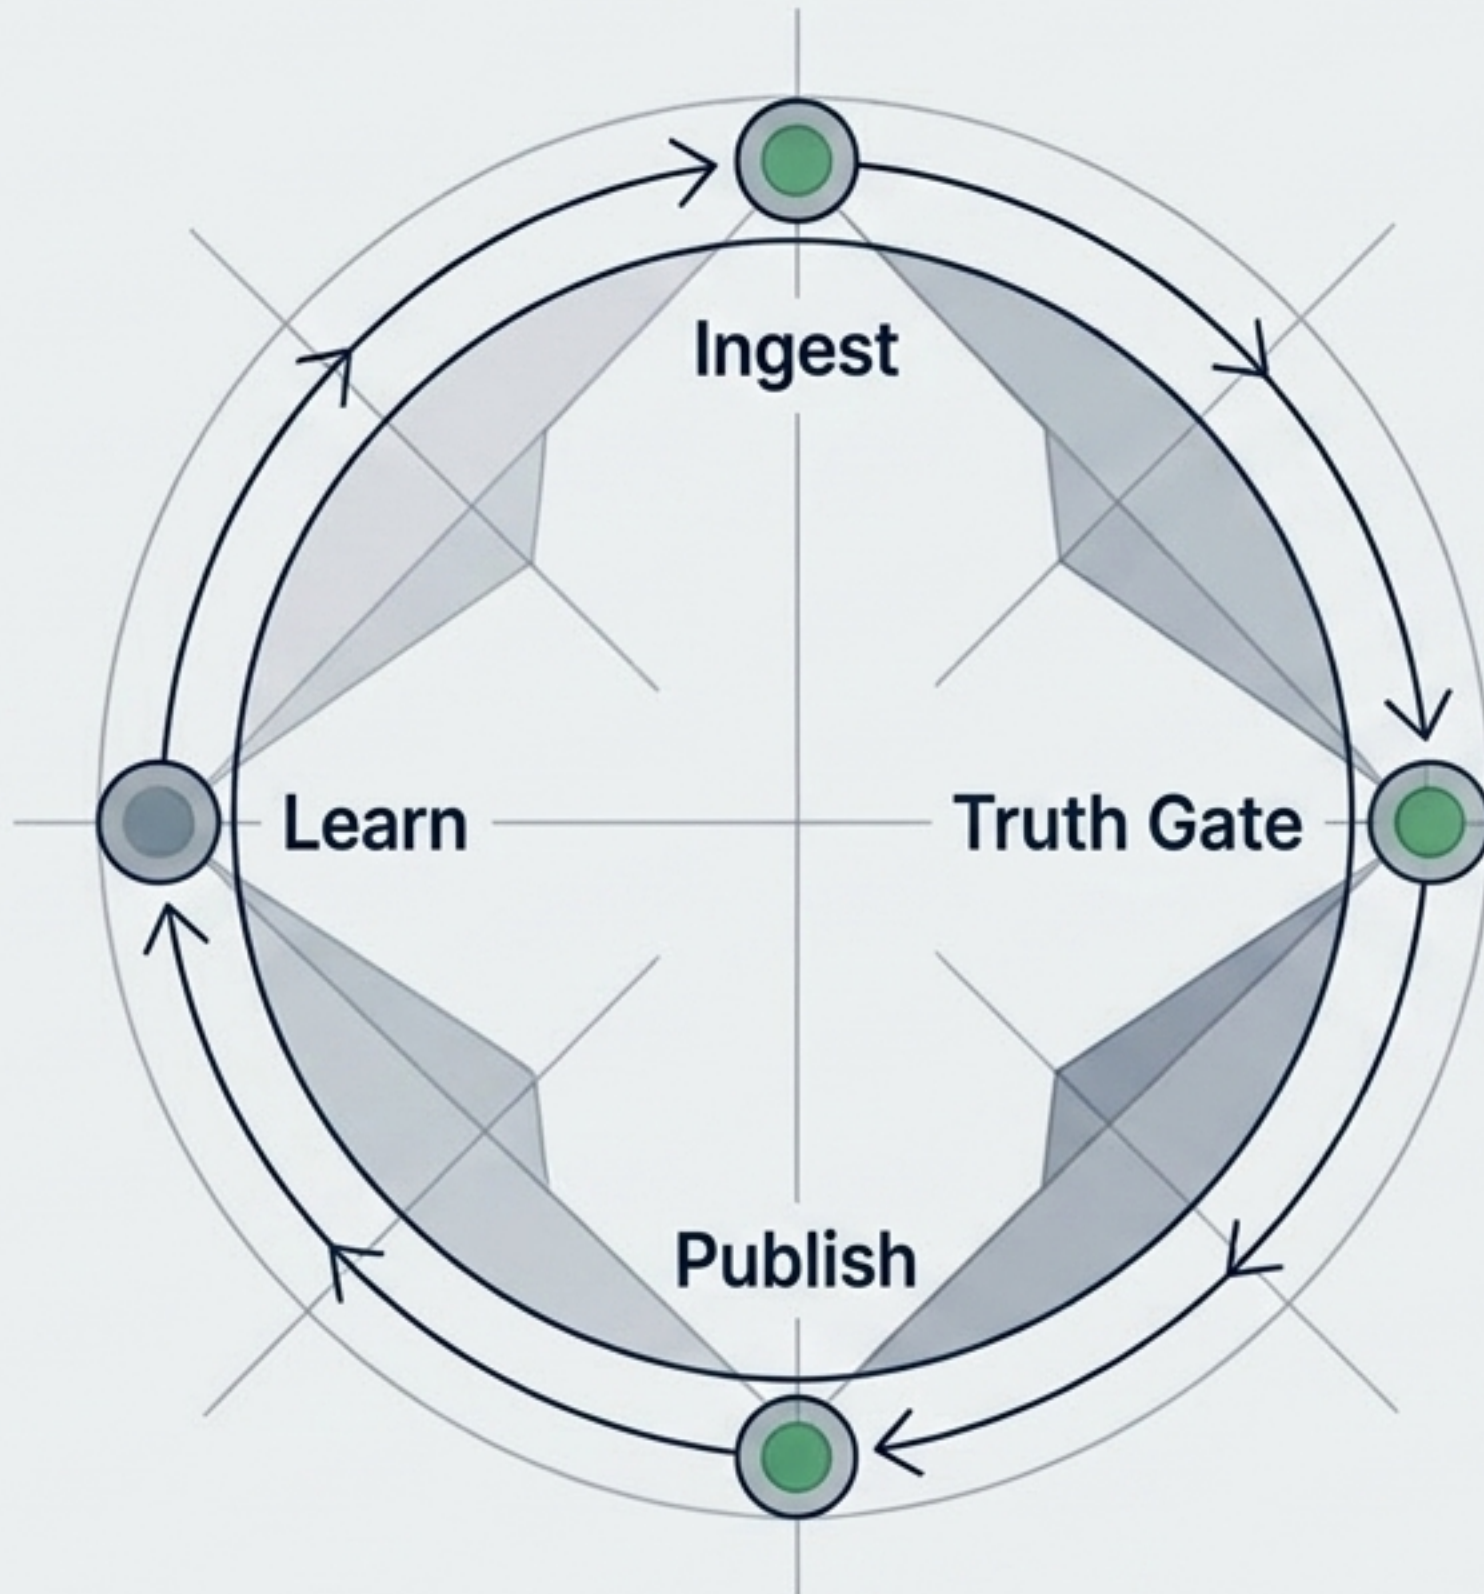

Maintaining domain-specific authenticity across high-volume posting is nearly impossible to sustain manually.

Basic AI Writers Endanger Your Professional Brand

Deploy An Adaptive, Truth-Gated Content Engine

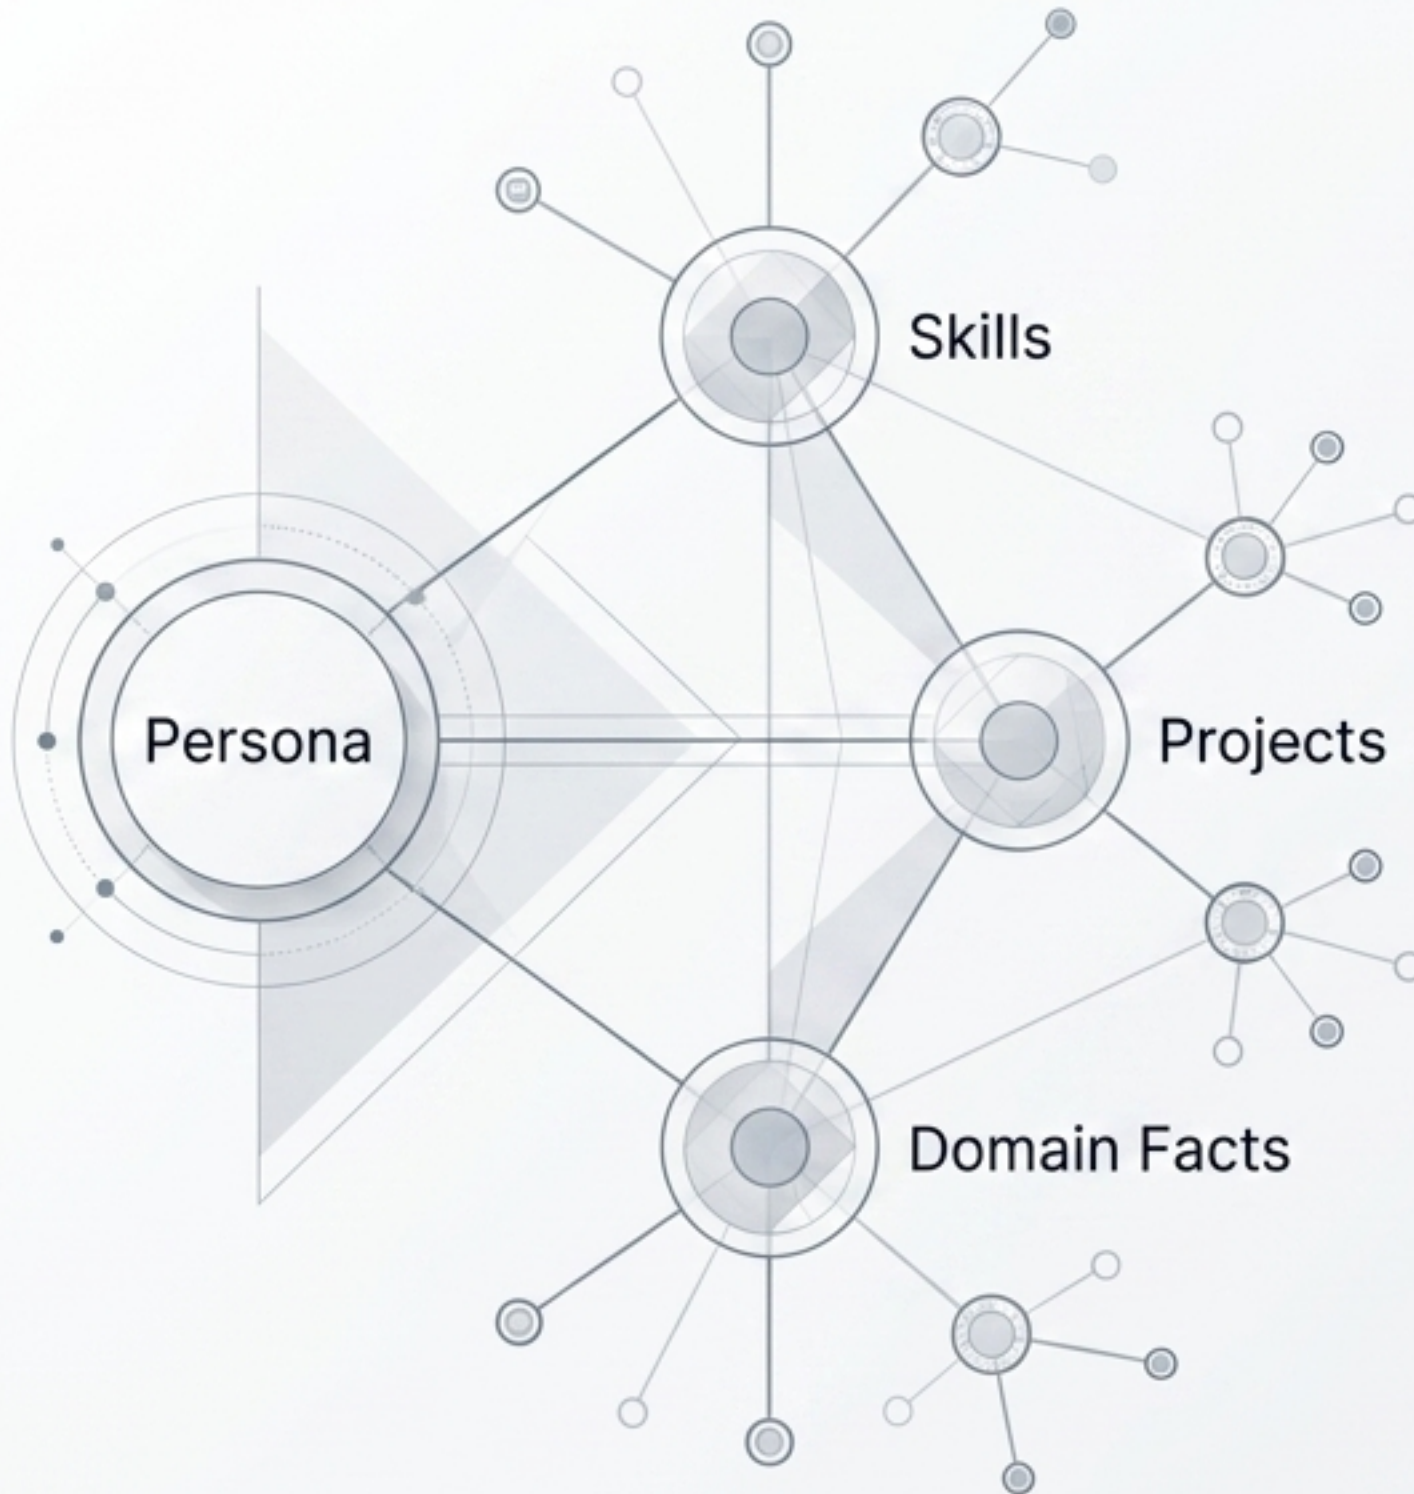

Combines advanced **spaCy NLP** with **local memory** to curate, rank, and route content autonomously.

Learns continuously from your specific industry news and your Buffer publishing habits.

Operates **locally** via **Ollama** without relying on vulnerable cloud AI keys, ensuring total data sovereignty.

Ground Every Interaction In True Domain Expertise

NetworkX-powered knowledge graphs link your specific skills to verifiable real-world projects.

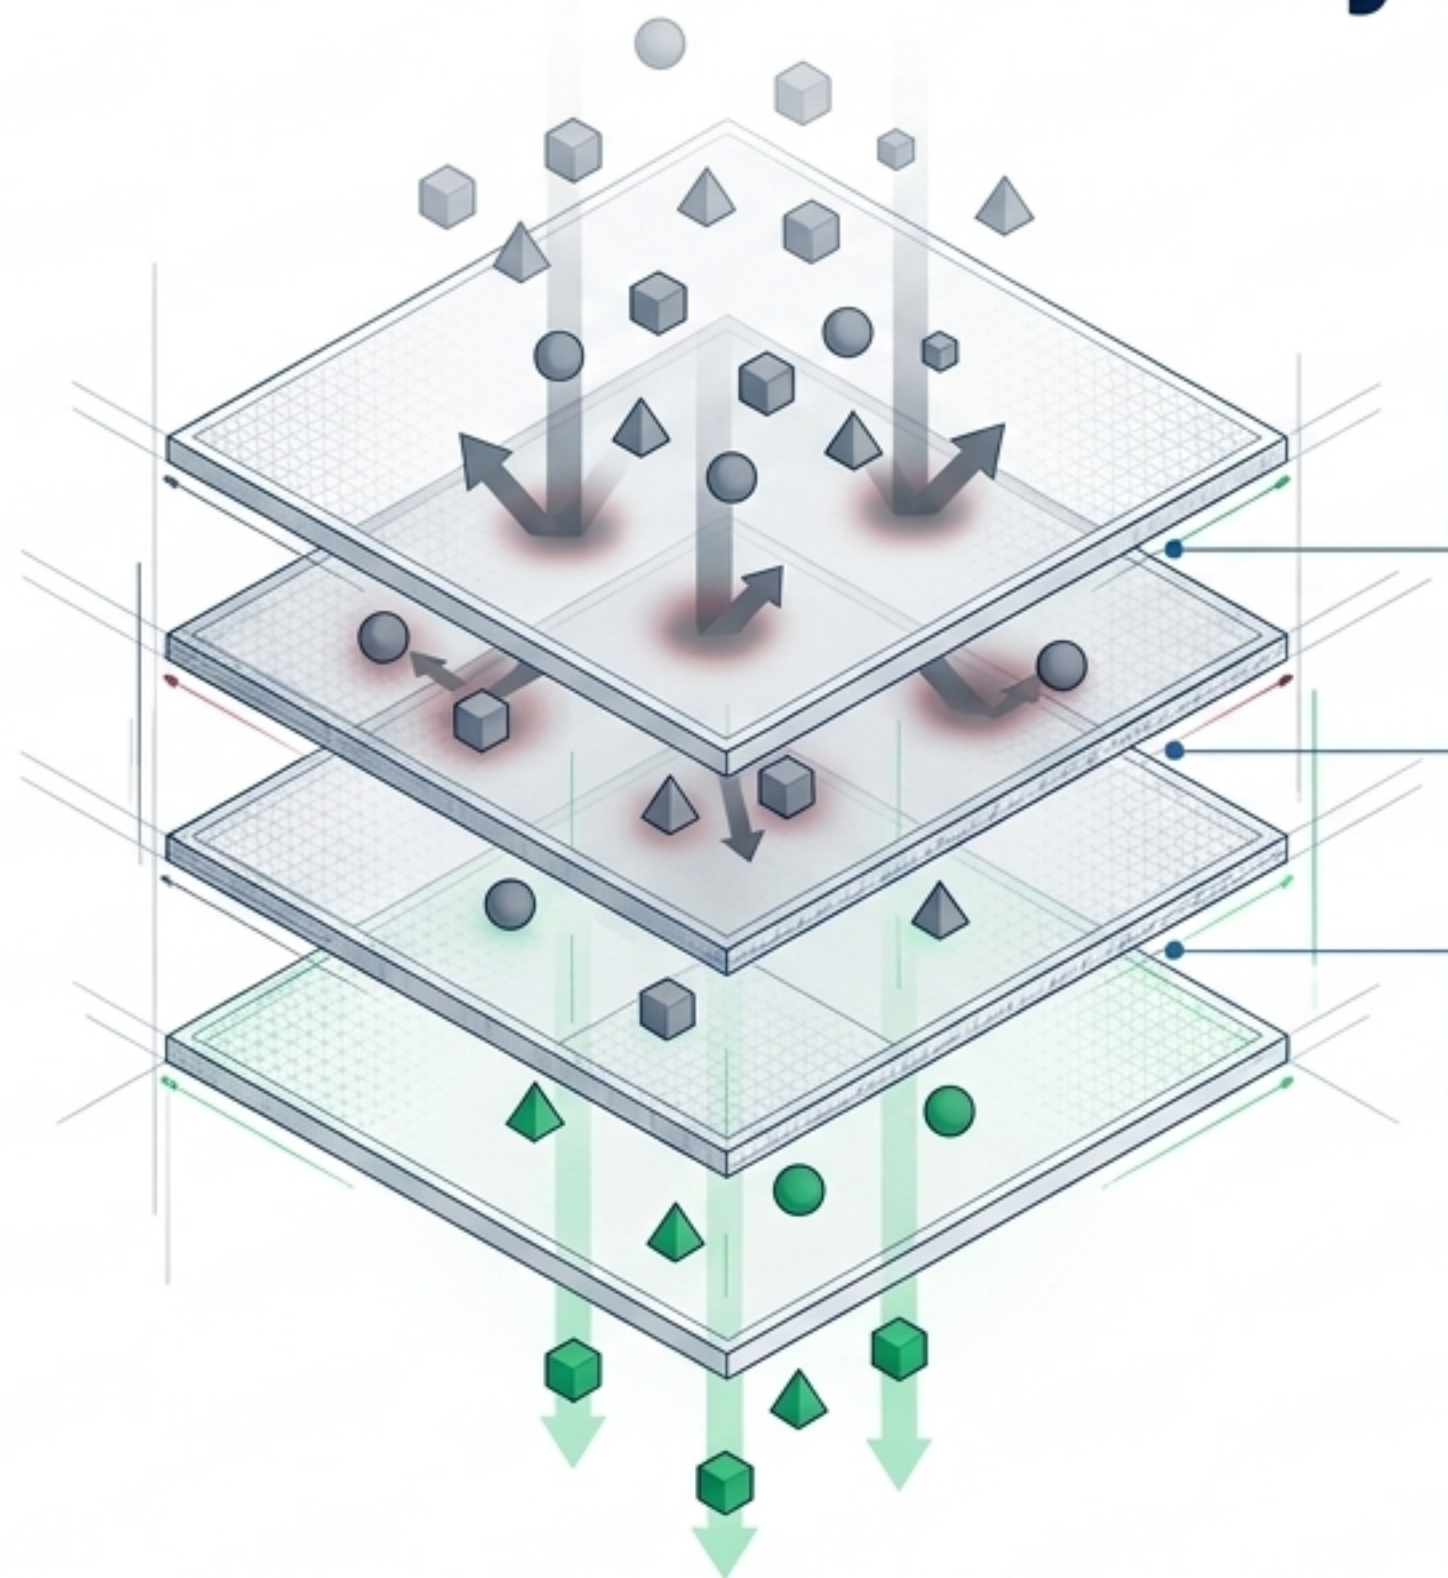

Dynamic memory tracks recent themes and penalizes repetition, keeping your feed constantly fresh.

Automatically ingests new industry facts and citations, completely eliminating generic bio-blurbs.

Eliminate Hallucinations With Four-Layer Truth Gates

Evaluates every generated sentence with a strict Derivative of Truth (DoT) composite gradient score.

Enforces strict mathematical thresholds for evidence quality, reasoning strength, and source credibility.

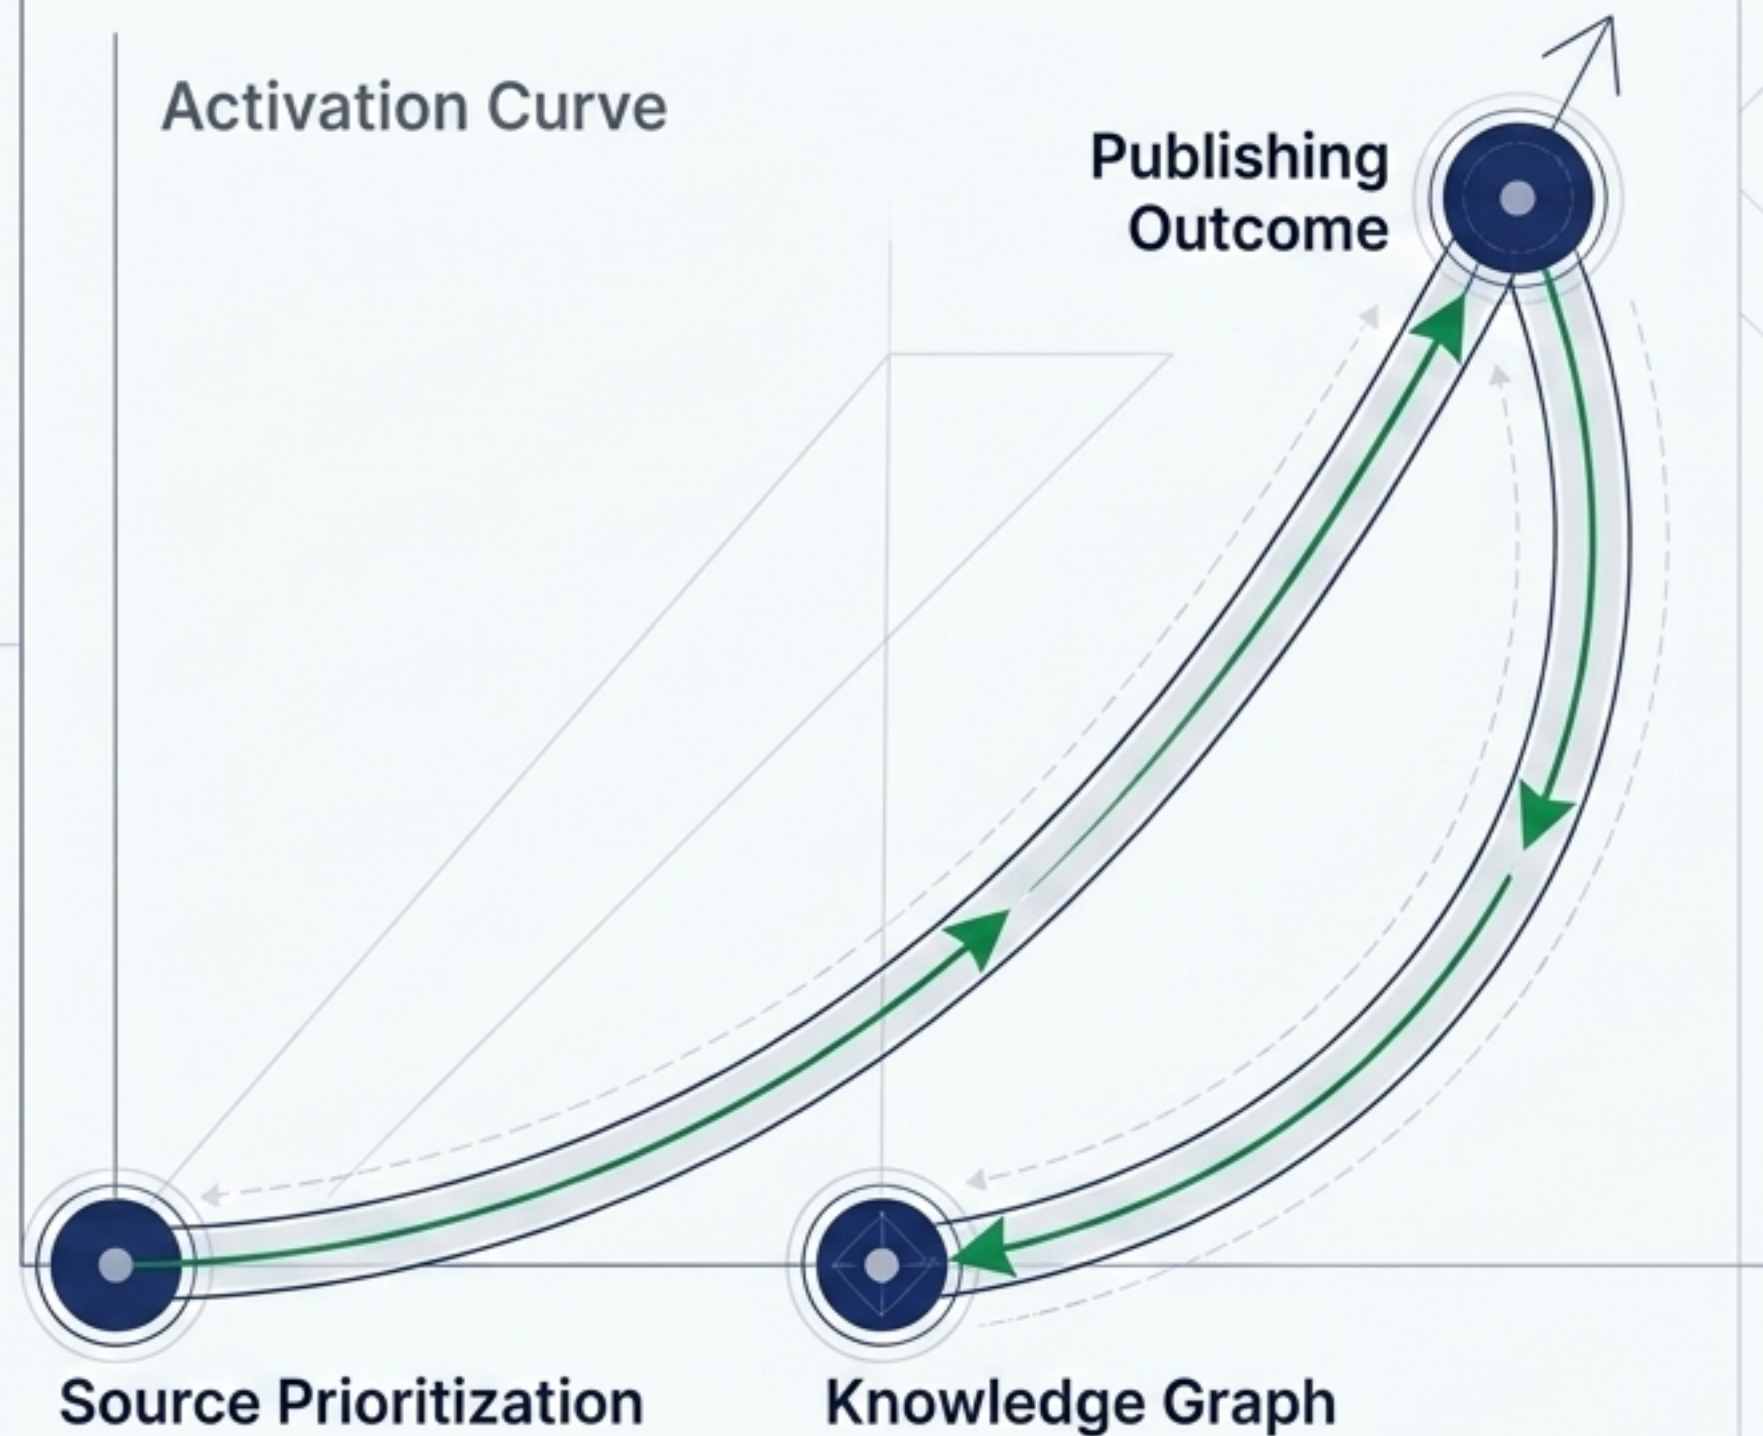

Automatically filters and flags unsupported claims before anything reaches your publishing queue.

Self-Improving Intelligence Adapts To Your Audience

Ingests RSS feeds, extracting and **deduplicating key facts** via advanced NLP and BM25 retrieval.

Updates acceptance priors based on actual Buffer publication outcomes and audience resonance.

Dynamically **promotes** information sources that consistently yield high-performing, clean content.

The Paradigm Shift In AI Content Curation

	Basic AI Writer	<u>SSI Booster</u>
Memory Architecture	 Static, amnesiac prompts	 Self-improving hybrid RAG pipelines
Fact-Checking Gates	 Invents statistics	 Deterministic validation and evidence scoring
Data Privacy	 Manual generic generation	 Automated, logic-backed content routing

Seamless Buffer Integration

Routes curated posts based on confidence scores and policy settings directly to Buffer Queues or Ideas via GraphQL API.

Optimizes publication cadence for proven high-engagement windows (e.g., Tue/Wed/Fri 4 PM) when confidence is high.

Applies rigorous confidence scoring as a multi-level quality gate, implementing nuanced handling based on selected policy.

Expand Your Presence With Multimodal Generative Assets

Generates persona-aligned, art-directed visual content locally using integrated FLUX.1 models.

Translates technical concepts into creative knowledge expression via Rei Toei algorithmic audio.

Built for future-proof expansion with Katzilla government datasets and Neo4j database integration.

Accelerate Reach And Inbound Growth Opportunities

Maintaining an SSI above 70 is proven to generate **45% more inbound professional opportunities.**

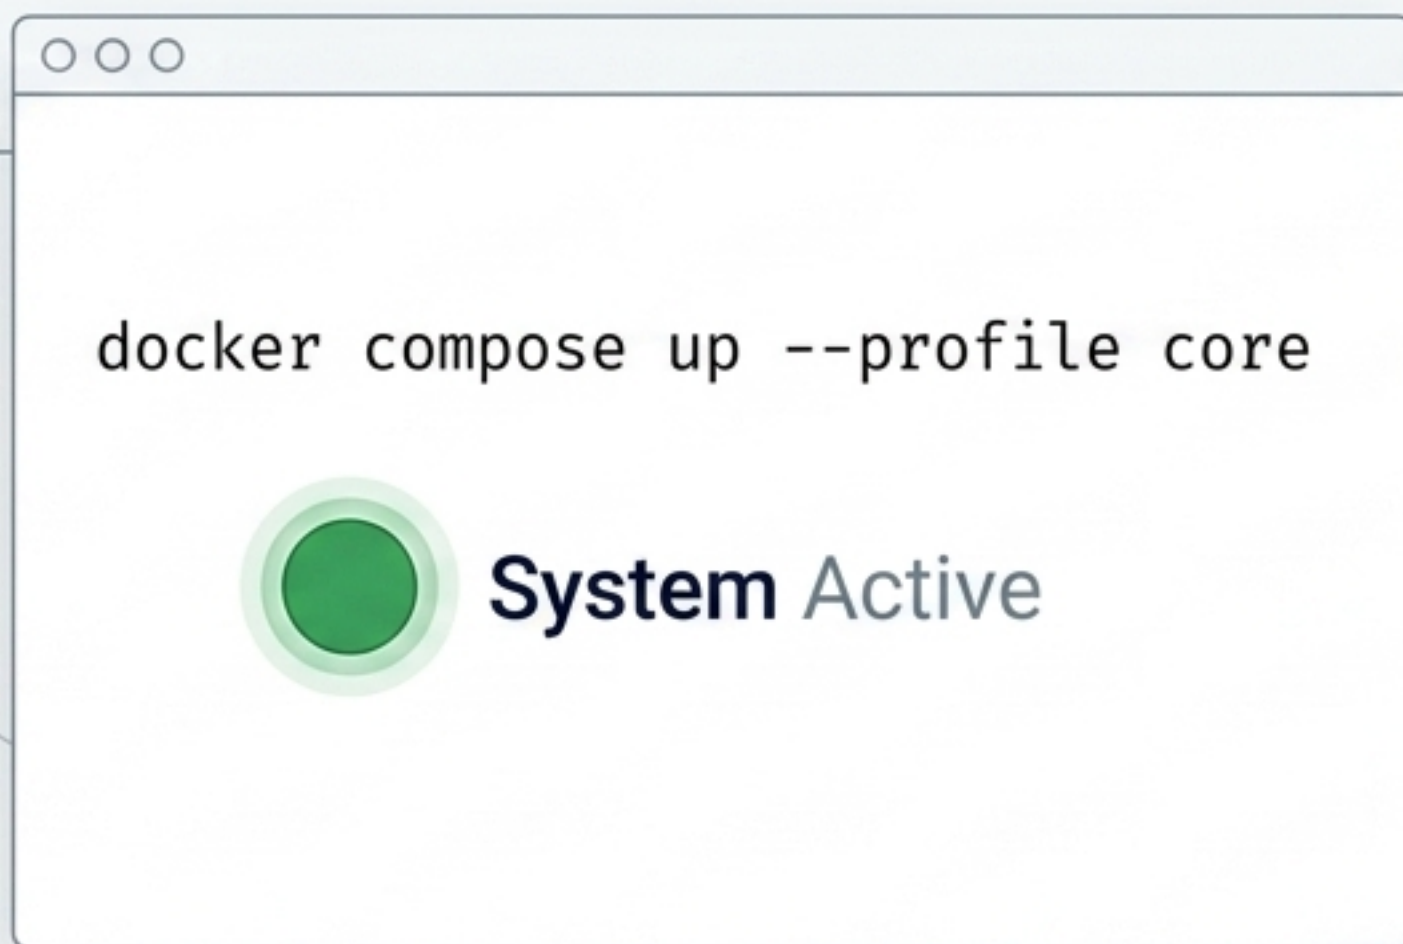

Systematically fulfills all four LinkedIn algorithm pillars: **Branding, Targeting, Engaging, Relationships.**

Transforms your deep technical knowledge into a **zero-friction, 24/7 brand growth asset.**

75+ SSI Score

Reclaim Your Time While Scaling Your Influence

1

Deploy the core Docker stack locally to ensure complete data privacy and hardware sovereignty.

2

Configure your custom persona graph and define your preferred industry knowledge sources.

3

Connect your Buffer account to immediately launch your self-improving growth engine.
